2. The application has been amended as follows:

Please amend the claims as follows:

19. (currently amended) A monitoring apparatus located in a hydrocarbon wellbore comprising:

a monitor for measuring characteristics of fluids in the hydrocarbon wellbore, the monitor having a monitoring surface that is directly exposed to fluids in the hydrocarbon wellbore;

a deposit removal system including an acoustic device for exerting a physical force on the monitoring surface to at least partially remove a deposition of material from the monitoring surface; and

a power supply for supplying said acoustic device with electrical energy, wherein the monitor further uses the acoustic device, said acoustic device to be operated ~~operates~~ in a resonance mode, wherein the monitor measures deposition of the material on the monitoring surface ~~is measured~~ by measuring a change in resonance frequency of the acoustic device and wherein the acoustic device operates in a longitudinal mode.

25. (currently amended) ~~The apparatus of claim 19,~~ A monitoring apparatus located in a hydrocarbon wellbore comprising:

a monitor for measuring characteristics of fluids in the hydrocarbon wellbore, the monitor having a monitoring surface that is directly exposed to fluids in the hydrocarbon wellbore;

a deposit removal system including an acoustic device for exerting a physical force on the monitoring surface to at least partially remove a deposition of material from the monitoring surface; and

a power supply for supplying said acoustic device with electrical energy, wherein the monitor is selected from a group comprising optical sensors, electrochemical sensors, nuclear sensors, separation membranes, or acoustic sensors separate from the force exerting acoustic device.
